1. Introduction

Enterprise Summary is a GE solution for electric utilities to complement existing products including Advanced Distribution Management System (ADMS), which is GE's control room distribution platform. The Enterprise Summary solution addresses the need for charts and displays for various fields of information as well as management systems to facilitate monitoring and response outside or inside the control room environment.

Enterprise Summary is designed for ease of use and supports configurability to meet end user demands. Dashboards can be created and configured with widgets that can be added, removed, and rearranged through simple drag and drop operations. Widgets can display charts, graphs, and data fields and can also be modified to match end user needs.

The user interface for Enterprise Summary operates in any standard web browser.

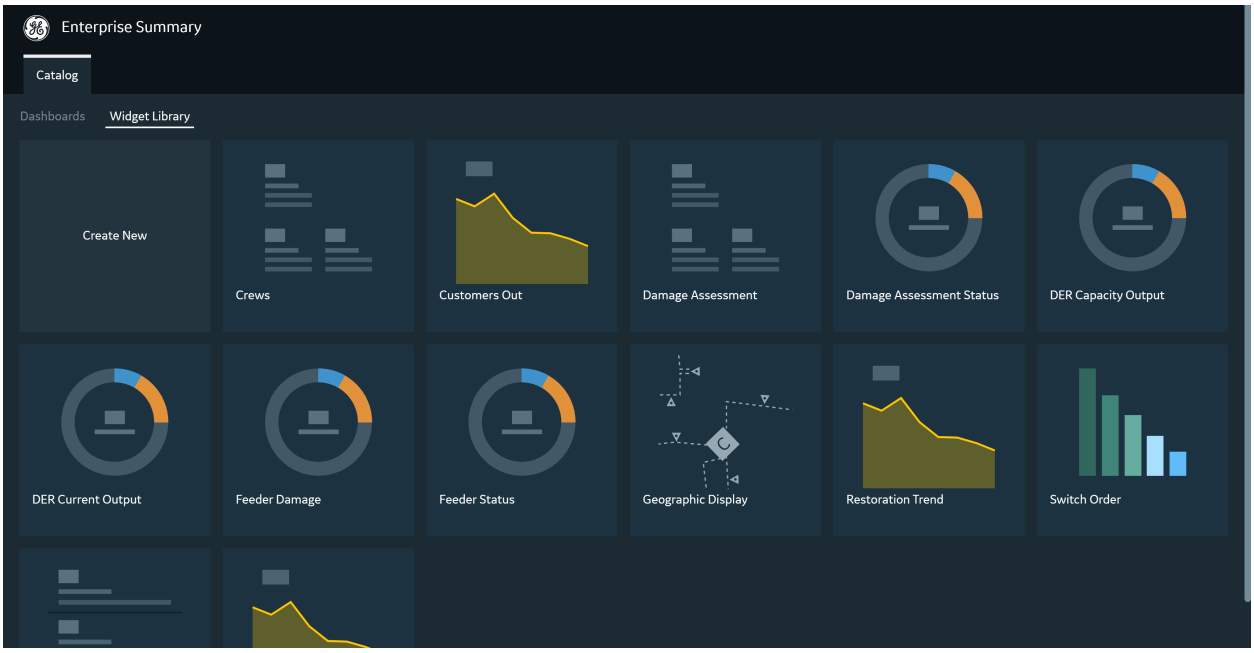

Figure 1. Enterprise Summary

2. User Interface Overview

The user interface includes a catalog of available dashboards and widgets, separated into the **Dashboards** and **Widget Library** tabs, respectively. Dashboard instances are opened in new tabs next to the catalog.

2.1. Dashboards

The **Dashboards** tab displays all available dashboards along with an overview of the layout of the widgets contained within that dashboard.

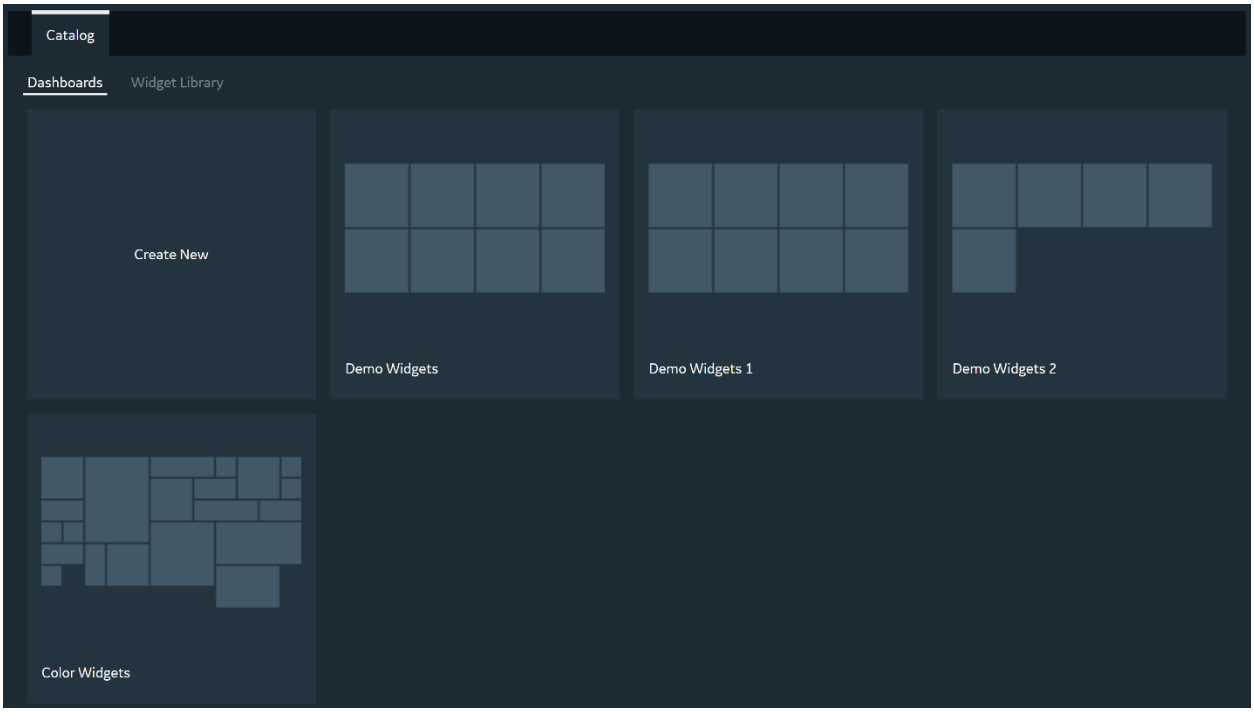

Figure 2. Catalog Dashboards Tab

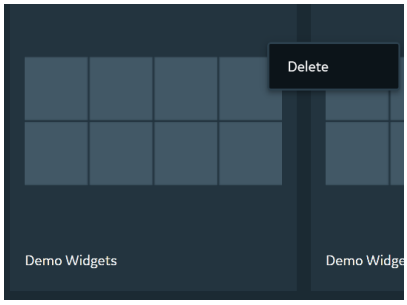
- To create a new dashboard, click the **Create New** button.
- To delete an existing dashboard, hover over the dashboard. A 3-dot menu will appear with a **Delete** option.



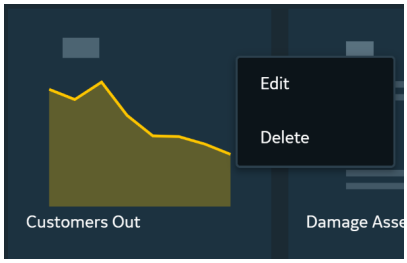
- Clicking on a dashboard instance opens a new tab next to the catalog.

2.2. Widget Library

The **Widget Library** tab displays all available widgets and an overview of their type.

Figure 3. Example Widget Library

- To create a new widget, click the **Create New** button.
- To edit or delete a widget, hover over a widget display, which will show a 3-dot menu, and then select **Edit** or **Delete**.



The widgets available in the **Widget Library** tab are the same widgets displayed in the **Add Widgets** panel on dashboard instances (see Add Widgets Panel).

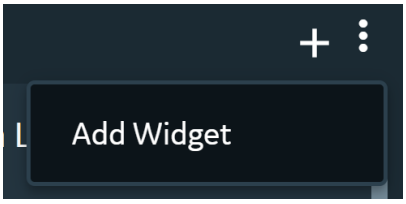
2.3. Dashboard Instances

You can open any dashboard by clicking on their overviews in the dashboard catalog. You can also open multiple dashboards at once. All opened dashboards will appear in tabs next to the **Catalog** tab.

Figure 4. Opened Dashboard Instance

- You can click the **X** button on a dashboard tab to close it.
- Changes made to a dashboard are automatically saved.
- You can add widgets to the dashboard instance with the buttons on the top right.
  - **Plus Button:** This button opens up the **Add Widgets** panel.

  - **3-Dot menu:** This menu contains the option to add widgets by configuration.

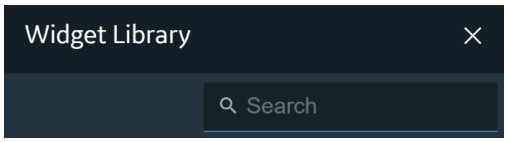
    


2.3.1. Add Widgets Panel

You can use the **Add Widgets** panel to add widgets to the dashboard through drag and drop. The widgets displayed here are the same widgets as on the **Widget Library** tab. You can also see a preview of the widget, which indicates the type.

Figure 5. Add Widgets Panel

- To add widgets to a dashboard, drag a widget from the library onto a dashboard.
- While dragging, the **Widget Library** tab will close. However, once you drop the widget onto a dashboard, it will reopen automatically.
- You can click the **Search** icon to search for widgets by name.



- You can close the **Widget Library** tab by clicking the **X** button at the top.

2.3.2. Add Widgets by Configuration

If additional widget configurations are available, you can paste them into the **Add Widgets** panel by using the **Configuration** panel to add the widget to the dashboard.

> This is not intended to be an end-user feature and will likely be removed in future versions.

3. Widgets

This section describes all the widgets available for Enterprise Summary. You can hover over any chart to see more information about it.

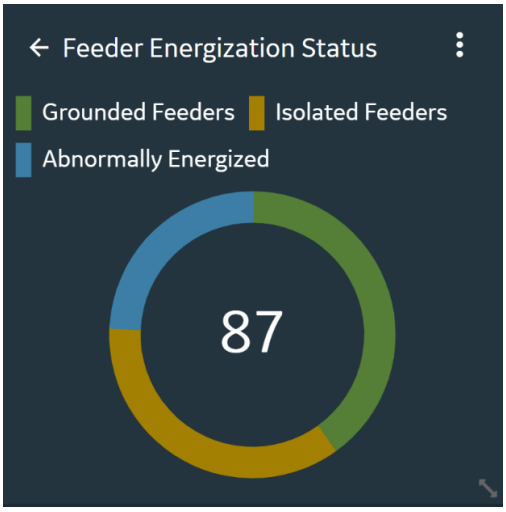
Widget Image	Widget Name and Description
	Crews: This widget displays the number of active, standby, and unavailable crews.
	Customers Out: This widget displays a trendline of customers for the past 6 hours, along with the current number of customers out.

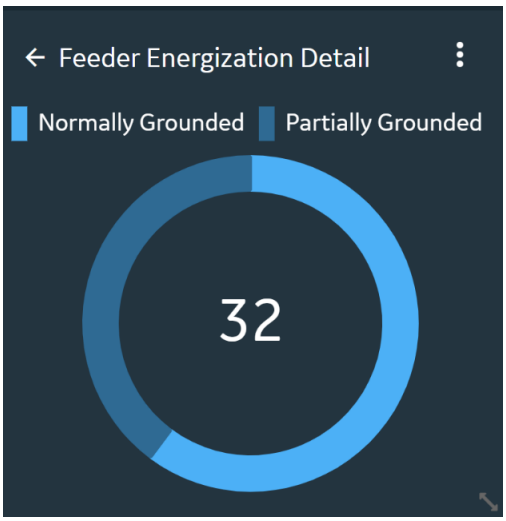
Widget Image	Widget Name and Description
	**Damage Assessment:** This widget displays progress bars for pending assessments and customers.
	Damage Assessment Status: This widget displays a donut chart for completed and in-progress assessments. The totals are displayed in the center.

Widget Image	Widget Name and Description
	**DER Capacity Output:** This widget displays a pie chart of the capacities of various power sources. Clicking on a slice displays substation information for that source.
	
	**DER Current Output:** This widget displays a pie chart of the outputs of various power sources. Clicking on the slices displays substation information about the source.

Widget Image	Widget Name and Description
	**Feeder Damage:** This widget displays a donut chart for pending and completed feeders. Clicking on the slices displays additional energization information and grounding details. The totals are displayed in the center.

Widget Image	Widget Name and Description
	**Feeder Status:** This widget displays a donut chart of planned, unplanned, and undamaged feeders. Clicking on the slices displays additional energization information and grounding details. The totals are displayed in the center.
	
	





Widget Image	Widget Name and Description
	**Geographic Display:** This widget shows an overview of the area of operations.
	**Restoration Trend:** This widget shows a trendline chart for restoration orders from the past 12 hours (light blue) and restoration orders in the upcoming 12 hours (dark blue).
	Switch Order: This widget shows a stacked bar chart of the weekly orders that are planned, in progress, or completed.
	**Top Incidents:** This widget shows the customer count and critical number of customers for incidents, along with their status, location, date, time left, and IDs.

Widget Image	Widget Name and Description
	**Total Incidents:** This widget shows a trend chart for incidents in the last 12 hours, along with the current number of incidents.

4. Roles & Permissions Overview

Roles define a set of permissions that determine what actions users can perform within Enterprise Summary. There are multiple permission based functions within Enterprise Summary that will need to be setup for the users in order to perform certain actions. By default, there are two roles set up as well. Dashboard Admin which has access to everything and Dashboard Viewer which has read access to dashboards.

4.1. Permissions

There are several permissions that need to be configured in order to use Enterprise Summary. Below is a breakdown of each permission and what actions you can perform when permission is assigned.

Action	Name	Description
View dashboards	ui.dashboard.read.readAll	Access to view all dashboards
Create dashboard	ui.dashboard.write.create	Access to create new dashboards
Delete dashboard	ui.dashboard.write.delete	Access to delete a dashboard
Edit dashboard	ui.dashboard.write.editLayout	Access to modify the widget layout on a dashboard
Add a manual widget to dashboard	ui.dashboard.widget.write.createManual	Access to manually create a widget config on a dashboard
Add a widget from the Widget Library to dashboard	ui.dashboard.widget.write.addLibrary	Access to add a widget to a dashboard via the widget library
Edit a widget on dashboard	ui.dashboard.widget.write.edit	Access to edit a widget config on a dashboard
Delete a widget on dashboard	ui.dashboard.widget.write.delete	Access to delete a widget from a dashboard
View Widget Library	ui.dashboard.widgetLibrary.read.readAll	Access to view the widgets in the widget library catalog
Create widgets in Widget Library	ui.dashboard.widgetLibrary.write.create	Access to create new widgets in the widget library catalog
Edit a widget in Widget Library	ui.dashboard.widgetLibrary.write.edit	Access to edit a widget in the widget library catalog
Delete a widget in Widget Library	ui.dashboard.widgetLibrary.write.delete	Access to delete a widget in the widget library catalog

Figure 11. Add widget to dashboard via Widget Library

4.2. Roles

There are two roles setup in Enterprise Summary by default, Administrator and Viewer. The Dashboard Administrator has access to everything and the Dashboard Viewer has access to read dashboards only.

Role Name	Description	Permissions Assigned
Dashboard Administrator	View, create, modify, delete widgets and dashboards	ui.dashboard.read.readAll ui.dashboard.write.create ui.dashboard.write.editLayout ui.dashboard.write.delete ui.dashboard.widget.write.createManual ui.dashboard.widget.write.addLibrary ui.dashboard.widget.write.edit ui.dashboard.widget.write.delete ui.dashboard.widgetLibrary.read.readAll ui.dashboard.widgetLibrary.write.create ui.dashboard.widgetLibrary.write.edit ui.dashboard.widgetLibrary.write.delete
Dashboard Viewer	Can view dashboards	ui.dashboard.read.readAll
